VINCENT CHIMAOBI OBASIOCHIE

Multimodal Prompt Engineer | AI Video Producer | Video Annotation Specialist
Abuja, Nigeria | 09068254110 | vincentchimaobi042@gmail.com | sekretv.contact@gmail.com
linkedin.com/in/vincent-chimaobi042

PROFESSIONAL SUMMARY

Multimodal Prompt Engineer, AI Video Producer, and Video Annotation Specialist with 3 years of hands-on experience taking AI-generated films and documentaries from story idea to post-ready final cut, backed by 5+ years in digital content writing, research and quality review. Currently an LLM Trainer at Turing, annotating robot-arm task videos with structured captions, atomic subtasks, execution-error documentation and outcome ratings under strict guidelines. CVAT Academy-based image annotation and independent CVAT video-tracking exercises add practical experience with object labels, visual boundaries, track continuity and keyframe interpolation. Co-founder of AI Nollywood-style film channels with 29,000+ subscribers, 13.5 million+ views and 20+ finished films, and freelance producer of AI-reconstructed true-crime and investigative documentaries for clients under contract. Experienced in scene-by-scene planning, shot-level continuity review, camera-perspective accuracy and assembling coherent long-form sequences across drama and documentary formats. Builds reusable production templates in ChatGPT, Gemini and Claude, and applies research-first quality checks to visual work. Holds prompt-engineering certifications from Udemy and Davidson College (edX).

TECHNICAL SKILLS, TOOLS & COMPETENCIES

- **Video Annotation & Frame-Level Review** — CVAT tracks, keyframes and interpolation; robot-arm footage analysis and motion/scene-change discrimination (Turing).
- **Computer Vision Image Annotation & Instance Segmentation** — CVAT bounding boxes, polygons, masks, label schemas and visual QA.
- **Shot-Level Visual Analysis & Scene Continuity** — composition, camera-perspective consistency, shot review and scene-by-scene sequencing.
- **AI Video Editing & Production** — narrative structure, storyboards, reconstructed CCTV/bodycam views and final assembly (CapCut).
- **Multimodal Prompt Engineering & Video Generation** — reusable production workflows using ChatGPT, Gemini and Claude.
- **Annotation Quality Assurance & Guideline Compliance** — missed-object detection, error logs, outcome ratings, ambiguity notes and consistency checks.
- **Investigative Documentary Research & Content Evaluation** — source verification, chronology, genre-aware production and rubric-based review (OneForma, TELUS, Remotasks).

PROFESSIONAL EXPERIENCE

Computer Vision Image Annotation & Video Tracking **Nov 2026 – Present**
CVAT Academy Curriculum & Independent Practice Projects

- Applied CVAT Academy's annotation curriculum through structured, project-based exercises involving multi-object image datasets, crowded urban intersections, roadside markets, pedestrians, vehicles, traffic infrastructure, and complex object interactions.
- Configured CVAT annotation tasks and custom JSON label schemas, defining object classes, annotation types, controlled attribute values, and classification rules for consistent dataset labeling.
- Executed multi-instance object annotation using bounding boxes, polygons, and segmentation masks, distinguishing individual objects within overlapping, partially occluded, and visually complex scenes.
- Applied brush-based masking, polygon-to-mask selection, and additive/subtractive region editing to isolate irregular object contours, exclude background pixels, and handle internal openings or disconnected visible regions.
- Implemented structured object metadata and image-level classification, including pedestrian activity, scene position, vehicle subtype, traffic-signal state, directional signage, and concise visual descriptions.
- Used task-specific annotation geometry, including polygons for object boundaries, masks for complex segmentation, and polylines for linear features such as roadway and curb boundaries.

- Completed CVAT video-tracking exercises using persistent object tracks, selective frame navigation, manually adjusted keyframes and interpolation; checked bounding-box alignment against the moving subject across the clip.
- Verified track identity and visual consistency through starting, intermediate and final frames, correcting position drift within the same track instead of producing duplicate frame-level objects.
- Performed systematic annotation quality checks, identifying omitted object instances, incorrect class assignments, merged objects, inconsistent attributes, duplicate annotations, and boundary inaccuracies; refined annotations against defined labeling guidelines.

LLM Trainer – Video Annotation Specialist **Oct 2026 – Present**
Turing – Remote

- Annotated **short robot-arm task videos for AI training data**, producing four structured deliverables per clip: intent caption, atomic subtask list, final summary, and outcome rating.
- Reviewed each clip in full before writing, logging objects, counts, colours, starting positions, gripper type, and end state, and **checking the final frames to confirm that objects actually reached their target**.
- **Separated the goal from the execution:** wrote each intent as what the robot was attempting even when it failed, kept the subtask list to the ideal sequence, and recorded every real mistake (missed grasp, slip, drop, retry, pause, jerky motion) in the final summary.
- Avoided false defects by **telling camera movement apart from robot movement**, ignoring captions, bystanders, and scene cuts, and judging left and right from the camera's view rather than the robot's body.
- Graded each outcome as Success, Partial or Fail by **comparing the end result with the stated intent** rather than the smoothness of the run, with a short evidence-based reason.
- Applied detailed guideline rules consistently across every deliverable, including word limits, voice, tense and caption punctuation, and checked each submission against a **self-audit checklist** before sending.
- **Documented decisions in reviewer notes**, flagging details that could not be verified (such as uncountable objects), ambiguities in the guidelines and a confidence level for each annotation.

Co-Founder & Creator, AI Nollywood-Style Faceless Film Channels **Oct 2023 – Present**
Self-Owned, Remote

- Created, owned, and ran AI-powered YouTube channels that grew to **29,000+ subscribers and 13.5 million+ combined views**, with full responsibility for **story choice, production, publishing, and audience growth**.
- Produced **20+ complete Nollywood-style films** entirely with AI, each taken independently from **story idea to finished video** and built on Nigerian stories, characters, and settings.
- Delivered films **on an ongoing basis since October 2023**, keeping the channels active through a steady run of finished productions, not one-off uploads.
- Wrote original stories and scripts, shaping each for **audience retention** with a strong opening and turns that keep viewers watching.
- Worked from **production templates** that set out each film's scenes, characters and visual needs before any generation began, so every film followed the same disciplined sequence from script to final cut.
- Planned each film **scene by scene at storyboard level**, with the visual requirements worked out in advance, which cut unnecessary retries and saved generation credits.
- Kept **characters recognisable from scene to scene** by locking down facial features, clothing, setting and small visual cues, so viewers follow the same person through the whole story.
- Held **locations, backgrounds and storyline consistent** across many generated scenes in long-form films, where one inconsistent scene can break a story's believability.
- **Reviewed every generated shot** for faces, characters, setting, composition and continuity, and corrected problems at the source before moving on, recording each film's revisions in **documented workflows**.
- Handled **voice production and scene sequencing** and combined **several AI tools in one production**, choosing the strongest output at each stage instead of relying on a single model.
- Worked through earlier generations of AI image and video tools, when holding a face steady across a long film took repeated, deliberate refinement, and kept testing new prompting techniques and tools to improve realism, consistency, and production time.

Search Quality Evaluator **Mar 2026 – Aug 2026**
OneForma – Remote

- **Interpreted map-search queries and user intent**, distinguishing business, category, navigational, address, and other query types to establish the expected result.

- **Evaluated search-result relevance** using geographic context, explicit location terms, user position, viewport freshness, distance and prominence.
- Examined place names, business categories, addresses and map-pin positioning, and used suitable authoritative sources to **verify details and identify discrepancies**.
- Applied **separate relevance and data-accuracy criteria**, guideline-based quality checks and concise, evidence-supported explanations to reach defensible assessments.

AI True-Crime Reconstruction Producer — Nov 2025 – Aug 2026

Freelance, Contract Basis – Remote (client and platform confidential under NDA)

- **Researched each case before production**, using specialised tools to work out what was actually reported, what happened and in what order, so every reconstruction rested on verified facts and not guesswork.
- Produced **AI-reconstructed true-crime videos** under contract, recreating real, documented cases that had no usable footage as scene-by-scene sequences built from the verified narration, and drew a strong audience response.
- **Recreated the look and behaviour of each camera type** with precision, including the movement of a body-worn view, the tone and noise of night-vision CCTV, daylight CCTV and dashboard-camera perspective, selecting the angle that best fit each moment of the case, so that reconstructions felt authentic to the format.
- Rebuilt **real locations accurately** from reference material, so settings, layouts and key details stayed true to the case from scene to scene.
- Designed the **production system** behind the videos: a master template plus an activation directive that **starts a new project in either ChatGPT or Claude** from a single script paste, with consistent results across tools and operators.
- Locked every scene to its script line and used a **"locked still, motion only" method**, so the footage can't drift from the facts of the case or redesign itself between stages.
- Kept people, outfits, buildings and objects consistent across long chapters with **role-based identity tokens** and fixed descriptors for recurring locations.
- Showed hidden processes and structures, such as internal systems, workflows and underground spaces, through **cutaways, transparent walls and exploded views**.
- Refined the system across versions and built compliance into it: **no real names in prompts, no readable text or logos**, and a **pass/fail audit** at the end of each chapter.
- Delivered finished, post-ready videos from first research to final cut, working independently to the client's brief and deadlines.

AI 3D Documentary Video Producer (AiTelly-Style & Fern-Style Content Production) — Jan 2024 – Oct 2025

Independent Content Production – Remote

- Produced **long-form investigative documentary videos end-to-end**, from reverse-engineering and analysing a successful reference video to a publish-ready final cut, in AiTelly-style and Fern-style documentary formats, including Fern-style productions built from scratch.
- **Deconstructed high-performing competitor videos** using AI-assisted analysis, breaking down their production methods, likely tool stack, scene-by-scene structure and pacing, and the editorial thinking that kept viewers watching, including in niches not produced before.
- **Turned a competitor's single-subject video into a bigger original production.** Studied a high-performing documentary on "How El Chapo Operated" and built a separate documentary on the Sinaloa cartel as a whole, covering its structure and how the syndicate operates across the world, with deeper research, scripting, and wording; the algorithm favoured it as up-next for the El Chapo audience.
- Built **research-to-script pipelines** that merge several first-hand accounts, such as agents, informants, and officials, into one fact-checked, cumulative narrative driven by a single central question, for example, how an undercover operative infiltrated an organised criminal group, with no speculation or invented detail.
- Wrote **six-chapter, hook-led scripts**: a cold-open hook, then sequential, curiosity-driven chapters, with guest audio kept verbatim and bridged by an insider narrator voice.
- Designed **animated chapter title cards** for each production, covering concept-to-symbol design, typography and motion, with titles fully legible on mobile and reproduced letter for letter in generated video.
- Directed **narration production** with text-to-speech, keeping narrator tracks separate from source audio and voiceover levels consistent across chapters.
- Translated every narration beat into **scene-by-scene visual direction**, using a still-to-video generation pipeline to keep a signature 3D CGI investigative look across the entire production.
- Kept characters, outfits and objects consistent across long multi-chapter productions with a **structured identity-tracking system**, so the same person looks the same in every scene and fewer generations are wasted.
- **Visualised abstract subject matter** such as covert operations, trafficking routes, surveillance and logistics through animated route maps, building cross-sections and system cutaways, so every narrated claim is shown on screen.

- Embedded **channel branding directly into scene objects** instead of using overlays, keeping it consistent without cluttering the footage or touching official markings.
- Planned and built **layered sound design** per chapter, using music beds, risers, stingers and deliberate silence, and mixed so audio never competes with narration.
- Ran **quality checks after each stage** and kept documented production workflows, so every project is repeatable, auditable and ready to hand to other editors, then assembled the final cut in CapCut for posting.

Digital Content Quality & Research Specialist — Jun 2022 – Dec 2023

TELUS Digital – Remote

- Read and evaluated **thousands of pieces of digital content** for relevance, clarity, factual consistency and completeness against project guidelines.
- Researched unclear information and weighed the evidence before concluding.
- Spotted content that was **ambiguous, conflicting, incomplete or unsupported**, and recorded the issues clearly.
- Applied changing project instructions while staying consistent across high-volume work.

Digital Content Review & Quality Operations — Oct 2020 – Jan 2022

Remotasks – Remote

- Accurately and consistently reviewed **10,000+ individual items** across repetitive, high-volume workflows.
- Checked completed work for errors, inconsistencies and missing information before submission.
- Worked independently and adapted to changing project needs and guidelines.

EDUCATION & CERTIFICATIONS

- **Mastering AI Leadership: Advanced Certificate in Prompt Engineering and Professional Ethics**, Davidson College | edX Professional Certificate — Jun 2026
- **Generative AI Essentials: Prompt Engineering Masterclass**, Udemy — Mar 2025
- **University of Port Harcourt**, Rivers State, Nigeria — B.Sc. in Physics Electronics (2016 – 2021)
- **Languages:** English (Conversational); Igbo (Native)
